

BIN BUDDY

INVENTORY REPLENISHMENT SYSTEM

For over 17 years, ServTronics has been providing their clients with outstanding programs designed specifically with the hardware buyer in mind. With a Bin Buddy Inventory Replenishment System, we can design a program that will reduce your costs while improving your efficiency.

Each Bin Buddy program is tailored to fit the customer's individual needs. Our experienced logistics team will work with you to craft the best program to keep your team operating at the optimum efficiency. If you are looking to automate and improve efficiencies, we can design a program to work for you.

With Bin Buddy, you can:

ELIMINATE
SHORTAGES
RECEIVING
INCOMING INSPECTIONS

REDUCE
ACCOUNTING TIME
INVENTORY
PROCESS

IMPROVE
PRODUCTION TIME
QUALITY
EFFICIENCY
MOVEMENT ANALYSIS

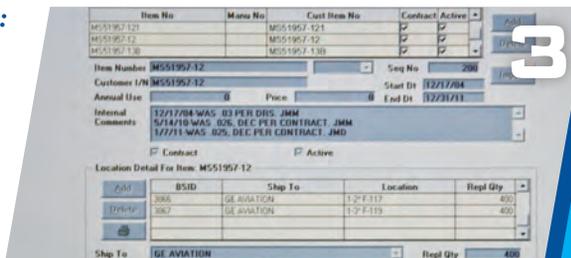

HOW IT WORKS:

Inventory is checked by someone on your team.

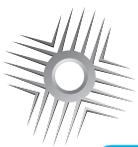

When inventory is low, you simply scan the product label on the bin with one of ServTronic's scanners. The scan is electronically sent to our system for processing.

When we receive the scan, it will be processed through our warehouse, a pick ticket will be generated and your parts will be shipped to you to replenish your bins.

Your inventory is now back up to desired levels for maximum production efficiency, with reduced administrative time.
